XBee Base Board (BTXBBV10)

The **XBee Base Board** by Brigosha Technologies is a low cost interface to plug in XBee wireless Trans-receiver module. The XBee Wireless Transmitter or Receiver module can be plugged into the XBee base board and data can be received or transmitted wirelessly. Apart from data transmission, the same base board can be used to configure the trans receiver module as transmitter, receiver or to form wireless networks, meshes, etc. from the computer using the on-board USB-Serial converter.

Key Features

- ☐ USB interface
- ☐ Reset pushbutton
- ☐ Header to plug in XBee trans-receiver module
- ☐ On board UART to USB converter
- ☐ Multiple powering options like USB or battery(5V)
- ☐ LED for status indication of Power
- ☐ XBee pins exposed for user development and debugging
- ☐ Comes with a comprehensive user guide and sample applications to get started
- ☐ Software support available

Applications

- ☐ Wireless Data Transmission & Reception
- ☐ To form wireless networks, meshes, etc
- ☐ Configuring XBee module using PC/computer
- ☐ Data collection at base station
